Health Economics and Health Policy

■ Purpose

Associated with declining birth rate, growing aging population, and sophisticating and spiraling medical care, healthcare costs continue rising in Japan. Annual healthcare cost has exceeded 40 trillion yen and is becoming a serious financial risk. Amid calls for more efficient resource allocation in healthcare and in facing the 2018 revision of pricing of healthcare technologies for the public health insurance, health economics is getting high attention as the bridge between healthcare and economics. It becomes an urgent issue to institutionalize a new system in which health economics directly informs policy decision making.

NICE, the National Institute for Health and Care Excellence, in the UK is a valuable example of a system where health economics directly contributes to policy making. In this symposium, we invite Professor Mark Sculpher from Center for Health Economics at the University of York, UK, who has advised NICE for many years. Three Japanese authorities are also invited to give presentations and to participate in a panel discussion involving the audience, to explore solutions to resolve the issues in healthcare system.
